I'll polist and post the package when I've a bit time for it.

I think it would be nice to make a complete QTF generator with it, but it would need a bit more work.

Many thanks in advance for the next version of this library. I am not in a hurry.

I suspect that most of the report are in a form of table and your class as is now cover most of the work (it is 100% of my output).

Ciao e grazie,  
Luigi
