luzr wrote on Mon, 29 May 2006 08:41 I believe that .tr file in .exe directory overwrites compiled-in translations (from .t files).

Mirek

Unfortunately not. It is the opposite: the compiled-in file override the .tr file in the exe directory. The items of .tr files are read only when .t file has not the correspondent item. I guess should be easy to invert such behaviour. Could you give me a hint?

Luigi
