Seven wrote on Tue, 30 May 2006 12:12: What about a Studio? Why not work in U++ to perform it in a studio? Well today exists more languages of programming with more adepts like java and lots of people know something about HTML. If U++ could support these languages more people it would join to the community and it would be great for everyone. Think bigger think higher =)

What do you mean? Which Studio?
