Hello all

There are four new packages in Sandbox to draw Scatter and series graphs in general. They are:

- ScatterDraw: Basic class
- ScatterDraw\_demo: Demo of headless drawing for console applications.
- ScatterCtrl: Control
- ScatterCtrl\_demo: Different series graph demos.

They combine ScatterCtrl and PlotCtrl/PlotLib features, plus some additional things, like they admit:

- Any kind of data sources through DataSource class
- User defined graph and mark functions

Please test them hard. They are intended to be included in main U++ .
