\_Seven\_ wrote on Tue, 30 May 2006 13:54 Well, i want mean that make U++ an editor for other languages like java or html or something like that. U++ would not be usefull only for C/C++ but for more languages so more people will join to the community

AFAIK, you can compile java with U++ and U++ editor has some java syntax recognition. You can try it.

P.S. But, please not only think higher but read, too ... Your topic is not related to "Functioning, Layout , Design, Features and Structure" of these forums. I will move it very soon.
