cbpporter wrote on Mon, 23 January 2012 15:22I am getting the "out of memory" log message and application crash quite often. Would it be possible for this message to print the total occupied RAM by the application before the call to new and the size of the requested block that caused the crash.

I can try... I cannot guarantee this is possible.

And I am using some DLLs. Should I use the USE\_MALLOC flag?

Well, it definitely worth a try. With DLLs, there is always chances that our new/delete overloads get mixed with system new/delete, especially if library is C++ based...
