Desktop : Windows 7 64bits, sometimes XP 32bits
I use MingW32, no Visual C++.
Instead i prefer CodeBlock to do pure c++ projects.

All applications I developp with u++ are destined for old desktop with processor Pentium II/III where are installed win NT/2000/2003 server. No major problems have been encountered expect with win NT.

I would like to one day test u++ project portability on linux or mac os.
