Hi Alboni,

It is quite simple, just call Left() (or Right(), Bottom() or Top()) on the toolbar widget. For example: MyAppWindow() {

```
Title("My application with bars").Sizeable();  
AddFrame(menu);  
AddFrame(tool.Left());  
menu.Set(THISBACK(MainMenu));  
tool.Set(THISBACK(SubBar));  
}(Code taken from tutorial/Gui_11, just added the Left()).
```

Best regards,  
Honza
