You have to 'refresh' toolbar explicitly by setting it again after making any changes to it:

```
struct BarTest: TopWindow {
   ToolBar toolbar;
    int tool;

typedef BarTest CLASSNAME;

void SetBar()
{
    toolbar.Set(THISBACK(ToolBarContent));
}

BarTest()
{
    tool = 1;
    AddFrame(toolbar.Left());
    SetBar();
}

virtual void Paint(Draw& w)
{
    w.DrawRect(GetSize(), Gray());
    w.DrawText(200, 220, AsString(tool));
}

void SetTool(int t)
{
    tool = t;
    Refresh();
    SetBar();
}

voidToolBarContent(Bar& bar)
{
    bar.Add("Move", CtrlImg::reporticon(), THISBACK1(SetToool, 1))
        .Check(tool == 1);
    bar.Add("Rotate", CtrlImg::reporticon(), THISBACK1(SetTool, 2))
        .Check(tool == 2);
}
```
