Subject: How to use the same .iml from multiple source files.
Posted by Alboni on Sat, 28 Jan 2012 22:15:00 GMT

If I use:

#define IMAGEFILE <myapp/myapp.iml>
#define IMAGECLASS myapp
#include <Draw/iml.h>

in a .h file that I include in multiple .cpp files I get linker errors.

What would be the correct way to do it?
