mdelfede wrote on Mon, 06 February 2012 11:41ah, ok... that can be easy done.

Which registers do you want to be displayed ? All is too much, I guess.....

16 integer, 16 FPU/YMM, FS, GS would IMO cover all important.

I guess you will need to figure out some smarter design than simple ArrayCtrl for this.

I even think that for integer registers, there could still be space to display even integer values and characters (unicode).
