Mirek was able to track the problem down and fix it, I don't know if IPv6 was involved.

It was compiled in Win and worked OK.
Running on Ubuntu with Wine was the problem.

If your code can be pasted into the SDK overwriting the current code I will try it, it may be a few days before I can get to it.

I don't know about that issue, but here is a merge for the hack I'm am using for IPV6 clients made with U++ 4552.

I hope that some day I'll have time do do a proper fix and add support for IPv6 servers too .
