Subject: Re: Various configuration serialization problems
Posted by frankdeprins on Fri, 24 Feb 2012 17:09:52 GMT

Since updating to 4596, I did not experience any problems anymore for a while.
But yesterday, and today, I lost my configuration settings again.
There must be some triggering event, but I have no clue what it may be.
What I did find, though, is that a source file with a define that is not properly closed (when you forget to add an #endif) has the potential to crash the IDE with an 'Out of memory' exception.
I also observed this same problem with a namespace that was not properly closed.

Best regards

frank
