BioBytes wrote on Tue, 28 February 2012 05:14Hi Mirek,

Are these changes implemented in the next release? I mean after the #4428.

They are commited, so they will be in next nightly, and in next release.

Quote:

SQL = MySession;
SQL.PerThread();

The syntax is valid, but it might not do what you expect. You need to create and assign a session in each thread again.
