Koldo,

I needed to separate another part to make it common: the one that manages the series list.

To do that, I used CRTP (Curiously Recurring Template Pattern) and added a SeriesGroupClass.

I extracted only the common parts, all specif methods like:

SetDataPrimaryY()

SetSequentialX()

. . .

were left in ScatterDraw.

I modified ScatterCtrl svn:4671 (see attached file) ==> all works fine in ScatterCtrl demo.

With this I have exactly the same interface for:

data managing line style plot mark style plot

NB: I also had to do some other minor changes:

Color GetNewColor(int id);

String GetNewDash(int id);

MarkPlot \*GetNewMarkPlot(int id); were moved to DrawingFuntions

and Scatter::Refresh() was made public

Do you agree to take these changes in account?

I think all common parts (at least in version 4671) are axtracted...
