Koldo,

I needed to separate another part to make it common: the one that manages the series list.

To do that, I used CRTP (Curiously Recurring Template Pattern) and added a SeriesGroupClass.

I extracted only the common parts, all specif methods like :
 SetDataPrimaryY()
 SetSequentialX()
 ...
were left in ScatterDraw.

I modified ScatterCtrl svn:4671 (see attached file)
==> all works fine in ScatterCtrl_demo.

With this I have exactly the same interface for:

 data managing
 line style plot
 mark style plot

NB: I also had to do some other minor changes:
Color GetNewColor(int id);
String GetNewDash(int id);
MarkPlot *GetNewMarkPlot(int id); were moved to DrawingFuntions
and Scatter::Refresh() was made public

Do you agree to take these changes in account ?

I think all common parts (at least in version 4671) are axtracted...
