To match them you should probably use:

```
TABLE_(matable)
  INT_   (ID) PRIMARY_KEY
  DATE   (SubscripDate)
END_TABLE
```

or:

```
TABLE_(matable)
  INT_   (ID) PRIMARY_KEY
  DATETIME (SubscripDate)
END_TABLE
```

using _ depending on whether first use of column name or not.

Since your table creation uses TIMESTAMP, I'm not sure how this differs on MySql. I use MSSQL and in that system I don't think that TIMESTAMP can be converted to a date. Your mileage may vary.
