Subject: Re: New graph packages Posted by Didier on Sun, 11 Mar 2012 18:50:12 GMT View Forum Message <> Reply to Message

Hello Koldo,

Quote: I have tried to understand your changes unsuccessfully. It is difficult for me to follow the changes in the files.

The changes I made are not functionnal modifications.

The idea is to move the common code from class A to a new template class: B.

The original class (A) then inherits from B: class a : public B {};

==> Class A therefore ahs the same methods as before, except for one (big) difference:

The return type of the methods : B::x() can only be of type B and not A

```
Usually in Upp method calls are chained: we write : x0().x1().x2()
```

So if I do class a : public B {}; ==> the method chaining is then broken

```
To prevent this, we can use CRTP in order to have correct return types CRTP
```

```
Better than long text here is an example:
------ Case 1 : the original code
class OriginalClass {
public:
OriginalClass() {}
OriginalClass& fctA() { ....; return *this; }
OriginalClass& fctD() { ....; return *this; }
};
```

we can write :OriginalClass inst; isnt.fctA().fctB(); but all is contained in 1 class

```
------ Case 2 : naive separation (does not work)
class BaseClass {
    public:
    BaseClass() {}
    BaseClass& fctA() { .....; return *this; }
};
class DerivedClass : public BaseClass {
    public:
    DerivedClass() {}
    DerivedClass& fctD() { return *this; }
};
```

```
==> we ##CAN NOT## write :DerivedClass inst;
isnt.fctA().fctB(); ==> compilation error
```

```
------ Case 3 : separation using CRTP
template<class DERIVED>
class BaseClass {
    public:
    BaseClass() {}
    DERIVED& fctA() { return *static_cast<DERIVED*>(this); }
};
class DerivedClass : public BaseClass<DerivedClass> {
    public:
    DerivedClass() {}
    DerivedClass& fctD() { return *this; }
};
```

==> We CAN write :DerivedClass inst; isnt.fctA().fctB(); ==> ScatterCtrl still works and separation has been made ==> I can reuse it !!!

So please reconsider these changes since I only MOVED code and NOT CHANGED code.
