Mirek please looke at the example attached to this post.

1. If you run the program and press the toolbar button the array control placed below it should be filled with 1000 rows. After that you can leave the program. Everything is fine.

2. Now if you move the mouse over the toolbar button and wait until tip shows and now if you press F5 (button shortcut) the array should be filled again but the button tip will stay and closing app will cause critical error.

I don't remember if upp gui is thread safe - anyway, is any solution for my problem?
