Hello ,

you can try that:

use dl.Add(key, value);

```
dl.Clear();
for(int i=1; i<=value; ++i)
{
    double k= value/i;
    if ( k > 5 && k < 45 )
    {
        String s = Format("%.02f", k); // convert to string
        //double StrDbf(const char *s);// back to double
        dl.Add(k, s);
    }
}
```

then to get the DropDownList value: use GetKey()

```
double d = fabs((double)dl.GetKey(i) - 17);
```
