omari wrote on Thu, 22 March 2012 10:25Hello,

you make it work by removing the line :

```
ReportWindow::ReportWindow();
```

a derived class call its base constructor automatically.

Oh yes.

You wrote this:

```
class ERPReportWindow : public ReportWindow
```

```
{
```

```
public:
```

```
typedef ERPReportWindow CLASSNAME;
```

```
ERPReportWindow()
```

```
{
```

```
    ReportWindow::ReportWindow(); // This line is redundant
```

```
};
```

```
};
```
