Hi there,

Having looked through all the TabCtrl functions and examples and this forum, I cannot see where to change the name of a Tab once created.

There must be a way to do this right?

Just to be clear....

```
...  
towerDefs.Add();  
CtrlLayout(towerDefs.Top());  
towers.m_tab.Add(towerDefs.Top().SizePos(),"this is the name which I want to be able to  
change");  
...
```

where m\_tab is a TabCtrl.

Cheers,

Nick
