Subject: How to change Tab name
Posted by nixnixnix on Tue, 27 Mar 2012 23:05:57 GMT

Hi there,

Having looked through all the TabCtrl functions and examples and this forum, I cannot see where to change the name of a Tab once created.

There must be a way to do this right?

Just to be clear....

...
 towerDefs.Add();
 CtrlLayout(towerDefs.Top());
 towers.m_tab.Add(towerDefs.Top().SizePos(),"this is the name which I want to be able to change");
...

where m_tab is a TabCtrl.

Cheers,

Nick
