Lance wrote on Fri, 30 March 2012 14:24I will upgrade as soon as one is available and do more testing.

I just submitted a package to launchpad which should build theide with debugging symbols (if I didn't make any mistakes), so it should be possible to debug. If you want to try it, just look for theide version 4727-2dbg~oneiric0 in the same PPA as before. It should be ready in couple hours at most. I probably won't be anywhere near computer till tomorrow, so if you happen to find the reason of the problem, leave a message here
