okay, I'll try. Thank you very much for your help!

I already connected with nc as client twice to the udp 3600 port, if i send from nc#1 the information appears at nc#2 and at Ideam, if I send from nc#2 it appears at nc#1 and Ideam but if i send from Ideam#2 i just appears at Ideam.... thats strange, isn't it?

and... all the input / output is scrambled...
