I've spent two evenings debugging why big project failed to work with latest big changes in U++.
After changing "Time" to "time" in XML configuration, everything started working.

So far we have two options:
1. Change "time" -> "Time" in latest U++. We will have "binary" compatibility with "old" XML files.
Which may be very important.
2. We may keep "time", but in this case we should change "String" -> "string" to comply latest
changes. This may be less important than having compatibility with old code generated files.
