Subject: HttpClientGet problems on Linux [BUG?]

Check this code:

```
String error;
String result = HttpClientGet("someserver.com/somefile.txt", NULL, &error);
if(result.IsEmpty())
  Cout << "Error: " << error << "\n";
```

Runs OK on windows, but prints this error in linux:
Error: socket(3) / connect(someserver.com:80): Operation now in progress

HttpClientGet is supposed to download the file during the call, and not return until ready or timeout, correct?
