Hallo guys,

I'm here again with a new little drawback xmlizing my VectorMap<Value, Value> v.

Xmelize pseudocode:

```
void prova6::Xmelize(XmlIO& xml)
{
    if(xml.IsLoading())
        {...}
    if(xml.IsStoring())
    {
        v.Add(elemento);

        XmelizeStore(xml, v);
        xml.Add("valori")
        ("elem", val);
```

I'm trying to obtain something like this:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes" ?>
<!DOCTYPE Materiali>
<Materiali>
<key>gcvh</key>
<valori>
<elem value="5"/>
</valori>
</Materiali>
```

but, at the moment the result is:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes" ?>
<!DOCTYPE Materiali>
<Materiali>
    <key type="String">gcvh</key>
    <value type="void"/>
    <valori>
        <elem value="5"/>
    </valori>
</Materiali>
```

Is there a way to eliminate type="String" and <value type="void"/> ?

Regards,  
Matteo
