Some enhancements :

- Values now are inspectable.... well, they will be when a patch will be embedded in core. No more crash when trying to inspect an uninitialized Value.
- When stopping inside a callback, now X11 grab is correctly released, allowing normal mouse and keyboard usage
- Ctrl-Q now opens QuickWatch pane getting the variable from cursor, either in code editor or in one of watch panes below.
- Some others that I forgot

Ciao

Max
