Didier wrote on Wed, 16 May 2012 18:23: I updated the GraphDraw\_test package in sandbox to add a REPORT button.

I noticed the BUG for two reasons:

Report scrolling is very bad  
the 'sand' mouse icon appears while scrolling the report ==> this means the background  
graphs are being updated

In Linux, example freezes at start. I believe it might well be related.

EDIT: Not really freezes, but is extremely slow. Still might be related
