Hello Mirek

This issue was not really important so you decide.

Here the problem is not that the XML strings generated are not exactly the same. The problem is that when reading them an exception is thrown.

If reading:
<type>int</type><value value="0"/>

would be like reading:
<b type="int" value="0"/>

And if reading:
<biosReleaseDate value="20080923"/>

would be like reading:
<biosReleaseDate>20080923</biosReleaseDate>

There would not be any problem .
