Subject: Value: String to int - problem or feature?

Hi,

Maybe I have a wrong understanding of how Value should work, but I keep getting Asserts on simple data conversions.

I have a VectorMap<String,Value> holding configuration data read from a section in an .ini file. When using numeric values in this ini file I get the asserts.

Could anyone please explain to me why I cant do the following:

```
Value v = "122";
int i = v;
```
