Why on earth did you want the 8th version? MSC7.1 works very well and you don't need 1 gigabyte... If are you saving space you can e.g. remove from 600MB SDK - 200Mb help files, 100Mb samples, 150MB mfc libs... What is left? 150MB! You can strip it more if you are not using 64bit and win95 stuff....
The link on the microsoft show me only the 8th version. Please indicate me the link of the 7.1 version.

Luigi

Today I had the courage to download again the version 8. It works   .
My program from 2.6 Mb passed to 1.75. Even the agg-aris application works. Now I must study the upp graphics.

Luigi
