All known SQLite problem - Sharing over network - may be solved by using one of network fork of SQLite:
http://www.sqlite.org/cvstrac/wiki?p=SqliteNetwork

Variant netSQLite have Public Domain license.
http://atensoft.net/dev/sqlite3.php

Perhaps, someone has worked with the product?

How it will be hard to connect this engine to U++?

Really need in-built engine that can work across a network.
