fudadmin wrote on Sun, 11 June 2006 18:21 Maybe that duplication is really needed for upp Ctlrs, I don't know. But isn't upp Draw and related classes just a low quality agg (in terms of graphics not programming)(like bin rasterizers)? Rectangle, size, clipping management... resizing, blending... Then DrawLine, DrawRectangle, DrawPolygon and similar.
But... don't pay too much attention to this...

Keep in mind one important thing - these operations are hardware accelerated and more importantly, are implemented by printer drivers.

Using AGG for printing as the only possibility would result in rendering each page as bitmap - 50MB / page.
