Well, first of all, commenting out // GuiLock is wrong.

I guess you might have done this because it seemed to be frozen - it would be no wonder as GuiLock, as written, would cover Sleep call, leaving virtually no chance for main thread to run...

First of all, try:

```
for(;;)
{
    {
        GuiLock __;
        if(Thread::IsShutdownThreads())
            break;

        String last = view.GetQTF();
        String now = last + "&[8 [ @4 show the qtf string ] ]";
        view.SetQTF(now);
        view.ScrollEnd();
    }
    Sleep(20);
}
```
