nlnelson wrote on Mon, 25 June 2012 08:14I installed Ubuntu 12.04

Tried the PPA

If upp has been installed where is it?

12.04 does not have Synaptic at least by that name.

It does have "Ubuntu Software Center" but searching for "upp" it was not found.

Hi Niel,

Judging by the output you posted you just successfully added the PPA to your sources and ran apt-get update. The last step is to run sudo apt-get install uppThat will install U++ and TheIDE. To verify this, you can check if the U++ sources appeared in /usr/share/upp and theide binary should be present in /usr/bin. Also, TheIDE icon should appear in your desktop environment menu/application launcher.

I am not very familiar with Ubuntu software center, so I can't really tell why it didn't found upp package. I think it should be there as soon as you update package list.

Best regards,
Honza
