Subject: Re: Can I use netSQLite to solve the problem of sharing SQLite database?
Posted by lectus on Thu, 28 Jun 2012 21:48:39 GMT

I use SQLITE because it's serveless and pain free. No messing with configurations and it's embedded in the final executable (thanks to static linking).

If a server solution is need it might be better to use Firebird, MySQL, whatever.

The reason for server-based Sqlite I think might be porting an existing BIG Sqlite database to work as a server.
