Hi,
I am using Backtrack 5 R1 (should be like Ubuntu), 32Bit with Gnome. The current user is root.
I tried to install TheIDE from the Debian Package File 'theide_4194-2~precise0_i386.deb'.
For the installation i used the following command:
Quote:dpkg -i '/root/Desktop/theide_4194-2~precise0_i386.deb'

But i got the following output:
Quote:Selecting previously deselected package theide.
(Reading database ... 242795 files and directories currently installed.)
Unpacking theide (from .../theide_4194-2~precise0_i386.deb) ...
dpkg: dependency problems prevent configuration of theide:
 theide depends on libgdk-pixbuf2.0-0 (>= 2.22.0); however:
  Package libgdk-pixbuf2.0-0 is not installed.
dpkg: error processing theide (--install):
 dependency problems - leaving unconfigured
Processing triggers for man-db ...
Processing triggers for desktop-file-utils ...
Processing triggers for python-gmenu ...
Rebuilding /usr/share/applications/desktop.en_US.utf8.cache...
Processing triggers for python-support ...
Errors were encountered while processing:
 theide

So TheIDE got wrong configurated. When I try to compile a Project I get the "Invalid build method" error.

The Compiler is set to GCC, but the GCC.bm file doesn't exist in any directory on my computer.

I am sorry for asking (and the bad english), but I tried perpetual and don't found an working solution.

Any ideas for fixing the problem?

Greetings,
Mike
