Thanks Mirek,

I still get the crash with version 5202 but I saw the bug post for the MSC10x64 compiler.
Apparently there is a patch available through MS support.

When you say that O2 is effectively not available, that means the FORCE_SPEED build right? It
doesn't affect the "optimal" build?

Does anyone know how to get hold of the MSC9x64 compiler? I have installed both VC++ 2008
and VC++2010 but I can't find this compiler.

Cheers,

Nick
