idkfa46 wrote on Sun, 05 August 2012 00:38I was trying to change column alignment (with QTFDisplay) by .AlignLeft() but nothing happen ... It's always at center
Technically, the GridQTFDisplay class forwarding GridDisplay Paint function through QTFDisplay Paint function, which doesn't use information about style variable, therefore GridCtrl align functions not applicable here.

Just use QTF paragraph formatting, e.g. "[< Left]", "[= Center]", "[> Right]", but "<" is by default (and not necessary for this case).

Now, you could understand why it was on the center.
