Hi,

I am working on report generation.I need help in designing the format...

In the Body section there is a table[Grid] which has header & multiple rows... when the data over flows and gets into the next page, Header of the table is not repeating expect in the first page.Only the row data appears on all other pages.

Wat should be done to repeat the header of the table on all the pages ???

Thanks & Regards,

Shwetha S
