Just one more little issue.

If I compile eigen_demo within the bazaar folder everything is ok.
But my program is in MyApps. When I try to add the eigen package (it is in bazaar/plugin) Theide can't see it and I'am not able to compile my program. Theide miss all the content of bazaar/plugin. Instead it see the content of /uppsrc/plugin

How to let theide to see c:\upp\bazaar\plugin\eigen package?

thanks,
luigi
