Hi,

Is this working well ? I compiled (rebuilt all) the RepGen_Test, and it doesn't generates a good report (see attached pdf).

I'm using last version (5283) of Upp, the Data.csv file for test seems good as well as QTF report files...

I don't understand what I'm doing wrong... What happens ?

The 2 reports look very similar, just 2 pages and some very little changes for the other, but no data corresponding to data.csv...

PS : could you explain more how to use ##BP, ##BT, ##EP and ##ET, please ? (already asked by mubeta) It could be good that it is mentioned in the doc
