Thanks, Sergey

I'll be busy tomorrow, so I'll see and try that on Thursday or Friday. I'll let you know...

I plan to use this for the reports of the application I'm developping now. I'll need also to print labels (on every sheets). In my case, sheets have 12 rows of 4 labels, and each label shows data of one row of the database. Do you think that I could use RepGen for that ? Or adapt it ?
