I found the folder the COMcheck code is in. It also has COMcheck2 that fixed a few glitches in COMcheck1.

<http://www.nlneilson.com/wwposts/COMcheck.zip>

Windows has:
using namespace System::IO::Ports;

If upp had something similar or could access that it would help.

edit: I just built the app again with the above code on Win7 64bit with M\$VC 10 with the /clr option.
I would like to connect to serial port in U++.
