Hi all. While working on my application I noticed strange working of GridCtrl, which can be reproduced using HomeBudget example (see attached video). Use-case is as follows:

- 1) edit existing cell which is using DropGrid as editor
- 2) create new row in DropGrid
- 3) choose to ignore this new value in GridCtrl
- 4) see how this new value is displayed in cell (no DB write was performed, can be confirmed by restart of HomeBudget)

Thus bug is either:

- GridCtrl cannot revert cell contents
- or GridCtrl is not saving updates properly

Or am I missing something and bug is in HomeBudget?

BR, Lubos
