Hello PoliMorf

Welcome to the forum.

To dynamically link dll to your project you can use DLI feature. It is explained here
([http://www.ultimatepp.org/srcdoc\\$Core\\$DLI\\$en-us.html](http://www.ultimatepp.org/srcdoc$Core$DLI$en-us.html)).

I do not know how to include .a files in your project. However they can probably be added in the project linker options.
