Thanks for the log, I'll try to figure out what happend... By the way, could you try to build theide using umk? If the problem is in the sources, it will fail as well, but if it is the PKGBUILD what's wrong it should work... The umk is compiled first, so even if the build fails it should be present in ".../aur-theide-nogtk-svn/src/umk".
