Hi everobdy,

I am looking for building an light application for WinCE. I have not experience with this O.S. and I wish to search some ways for try to do it.

There is any suggestion for build applications using U++? Package flags? Compiler flag? There is some suggested compiler?

For now I have no idea around WinCE and what is different from other Windows based O.S., so, any received information will be for me very important.

Thanks
